

Demonstration of Proposed Features

Date	10 July 2026
Team ID	
Project Name	Credit Card Approval Prediction System
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document presents the features proposed during the planning phase of the **Credit Card Approval Prediction System** and their implementation status. Each feature was developed, tested, and demonstrated successfully. The project automates the credit card approval process using machine learning and provides real-time prediction through a Flask web application.

S.No	Feature Name	Description	Status	Demonstrated	Remarks
1	Applicant Data Input	User enters applicant details through the web interface.	Implemented	Yes	Working successfully
2	Data Preprocessing	Handles missing values, encoding, scaling, and data cleaning before prediction.	Implemented	Yes	Successfully tested
3	Machine Learning Prediction	Uses the trained XGBoost model to predict credit card approval.	Implemented	Yes	High prediction accuracy
4	Result Display	Displays prediction result as Approved or Rejected with prediction details.	Implemented	Yes	Real-time prediction
5	Flask Web Application	Provides an interactive web interface for users to access the prediction system.	Implemented	Yes	Successfully deployed locally
6	Local Deployment	Application executed successfully using Flask on the local system and demonstrated in the browser.	Implemented	Yes	Ready for demonstration

Feature Implementation Summary:

Item	Value
Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
