

Problem–Solution Fit

Date	8 July 2026
Team ID	
Project Name	Credit Card Approval Prediction System
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

1. CUSTOMER SEGMENT(S) [CS] - Banks and Financial Institutions - Bank Credit Analysts - Credit Card Applicants - Financial Compliance Officers	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES[CL] - Limited time for manual verification. - Large number of applications. - Budget limitations for advanced systems. - Dependence on manual review.	5. AVAILABLE SOLUTIONS PROS & CONS [AS] Existing Solutions - Manual Verification - Traditional Banking Systems Pros - Human judgment - Existing banking workflow Cons - Slow process - Human errors - High operational cost - Not scalable
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] - Manual application verification takes a long time. - Human errors occur during approval decisions.	9. PROBLEM ROOT / CAUSE [RC] - Manual verification process. - Large volume of applications. - Complex financial information. - Lack of intelligent decision support.	7. BEHAVIOR + ITS INTENSITY [BE] - Reviews applicant information manually. - Checks income and credit history. - Approves or rejects applications. Intensity: High

• 3. TRIGGERS TO ACT [TR] • Requirement to reduce manual work. • Need for accurate risk prediction. • Increase in credit card applications.	10. YOUR SOLUTION [SL] Develop an AI-powered Credit Card Approval Prediction System using Machine Learning, Flask, and IBM Watson Machine Learning to: • Automatically analyze applicant details. • Predict credit card approval or rejection. • Reduce manual work and human error. • Improve prediction accuracy. • Provide real-time approval decisions through a user-friendly web application.	8. CHANNELS OF BEHAVIOR [CH] Online • Flask Web Application • IBM Cloud • Bank Portal Offline • Bank Branch • Credit Department • Manual Documentation
4. EMOTIONS BEFORE / AFTER [EM] Before • Stressed • Confused • Time-consuming After • Confident • Satisfied • Faster decision-making
